REMOVABLE BOLLARDS | RMB

Optima RMB series removable bollards are acting like fixed bollards however they can be removed manually. RMB series removable bollard has internal locking hardware. The key-lock of the bollard is on the top flange. It prevents the collection of dirt and debris as the top flange is located at a certain height from the ground. Because of its aesthetic design, it can be installed at any building. Carbon steel features high resistance to corrosion and any kind of weather conditions. There are two lines of reflective tape on the bollard as a warning. The bollard comes with a mounting cover to prevent collecting dirt in the bottom case when the bollard is demounted.

SYSTEM FEATURES
