

PARKING GUIDANCE SYSTEMS | PGS100

Due to the lack of available spots in cities, the need for parking management increases dramatically. This necessity makes smart parking systems in public and living places indispensable. Parking Guidance Systems create great advantages both to the owners of the car-parks and the drivers.

- Saves time while directing vehicles to available parking spots
- Enables seamless management of parking lot traffic without human intervention
- Provides detailed reports on the usage density of the area and planning via its functional interface
